

Bleach Disinfection

Use soapy water to wash high-touch surfaces, such as door knobs, toilet handles, faucets, sinks, commodes, bath rails, phones, counters, chairs (including backs), tables, hand rails, elevator buttons, light switches, keyboards, mattress covers, aprons, uniforms, linens, bedding and ice machines. Disinfect surfaces by applying a chlorine bleach solution.

Steam cleaning may be preferable for carpets and upholstery.

Warning: Chlorine bleach could permanently stain these.

1. Prepare a chlorine bleach solution - Make bleach solutions fresh daily; keep out of reach of children; never mix bleach solution with other cleaners

IF HARD SURFACES ARE AFFECTED...
e.g., non-porous surfaces, vinyl, ceramic tile, sealed counter-tops, sinks, toilets

$\frac{1}{3}$ CUP BLEACH + 1 GALLON WATER
CONCENTRATION - 1000 ppm

IF POROUS SURFACES ARE AFFECTED...
e.g., wooden floors or unsealed concrete or natural stone surfaces

$1 \frac{2}{3}$ CUPS BLEACH + 1 GALLON WATER
CONCENTRATION - 5000 ppm

2. Air dry surfaces unlikely to have food or mouth contact **OR...**
3. Rinse all surfaces intended for food or mouth contact with plain water before use

Wash your hands thoroughly with soap and water

NOTE: Open bottles of concentrated chlorine bleach will lose effectiveness after 30 days. Change bottles of bleach every 30 days for accurate concentrations. Prepare a dilution of fresh bleach every day of use and discard unused portions.
